to go. Selective degradation of the CTGF/CCN2 (connective tissue growth factor) gene promoter by the transcription factor GATA-2 in adult heart. Previous studies have indicated that GATA transcription factors may be involved in the control of CTGF/CCN2 gene expression in fibroblasts. These studies have also shown that the CTGF promoter can be activated by GATA-2, but not by GATA-3. To investigate whether GATA-2 could regulate CTGF gene expression in vivo, we have used the *Drosophila* antennae 82157476af
